

ABSTRACT OF THE DISCLOSURE

Methods, systems, and articles of manufacture consistent with the present invention provide resources adapted to at least one of a number of user environments. Execution of a program is initiated, the program having a session object and a resource identifier that is associated with a number of resource data stored in the session object. While the program is executing, it is determined from the session object which of the number of user environments the program is executing in, and it is identified which of the resource data is suitable for the determined user environment by using both the resource identifier and the determined user environment.
